7.9M Earthquake, Papua New Guinea

On 12/17/16 at 0251 hours, The National Tsunami Warning Center (NTWC) reported that an 8.0 magnitude earthquake occurred off the coast of New Ireland, Papua New Guinea. The NTWC initially reported that the potential for a tsunami to impact California was unknown and further analysis was needed. Per the California Geological Survey (CGS), the earthquake was a deep subduction zone incident.

- At 0346 hours, the NTWC downgraded the earthquake to a 7.9 and advised that there is no danger to California.
- At 0350 hours, the Cal OES Earthquake and Tsunami Program Duty Officer (EQTP DO) and CGS both confirmed that there is no threat to the United States Pacific Coast.

California Winter Storms

Dry, cold conditions will prevail through Monday morning. Clearing skies and warmer days are expected over the weekend, but overnight temperatures will be very cold. These low temperatures are not expected to break any records. This morning is expected to be the coldest although the rest of the overnight temperatures through the weekend will only be a few degrees warmer. Smaller cities and rural locations have the best chance of experiencing below freezing temperatures.

A cold air mass will bring frost to the Central Coast and Ventura Valleys this morning and widespread sub-freezing temperatures are expected tonight into early Sunday. The coldest areas will be the San Luis Obispo interior valleys, the Ojai Valley and the Antelope valley, where a hard freeze is expected, with lows in the teens to low 20's.

- An Incident has been created in Cal EOC for this event: 2016 December Statewide Storms

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

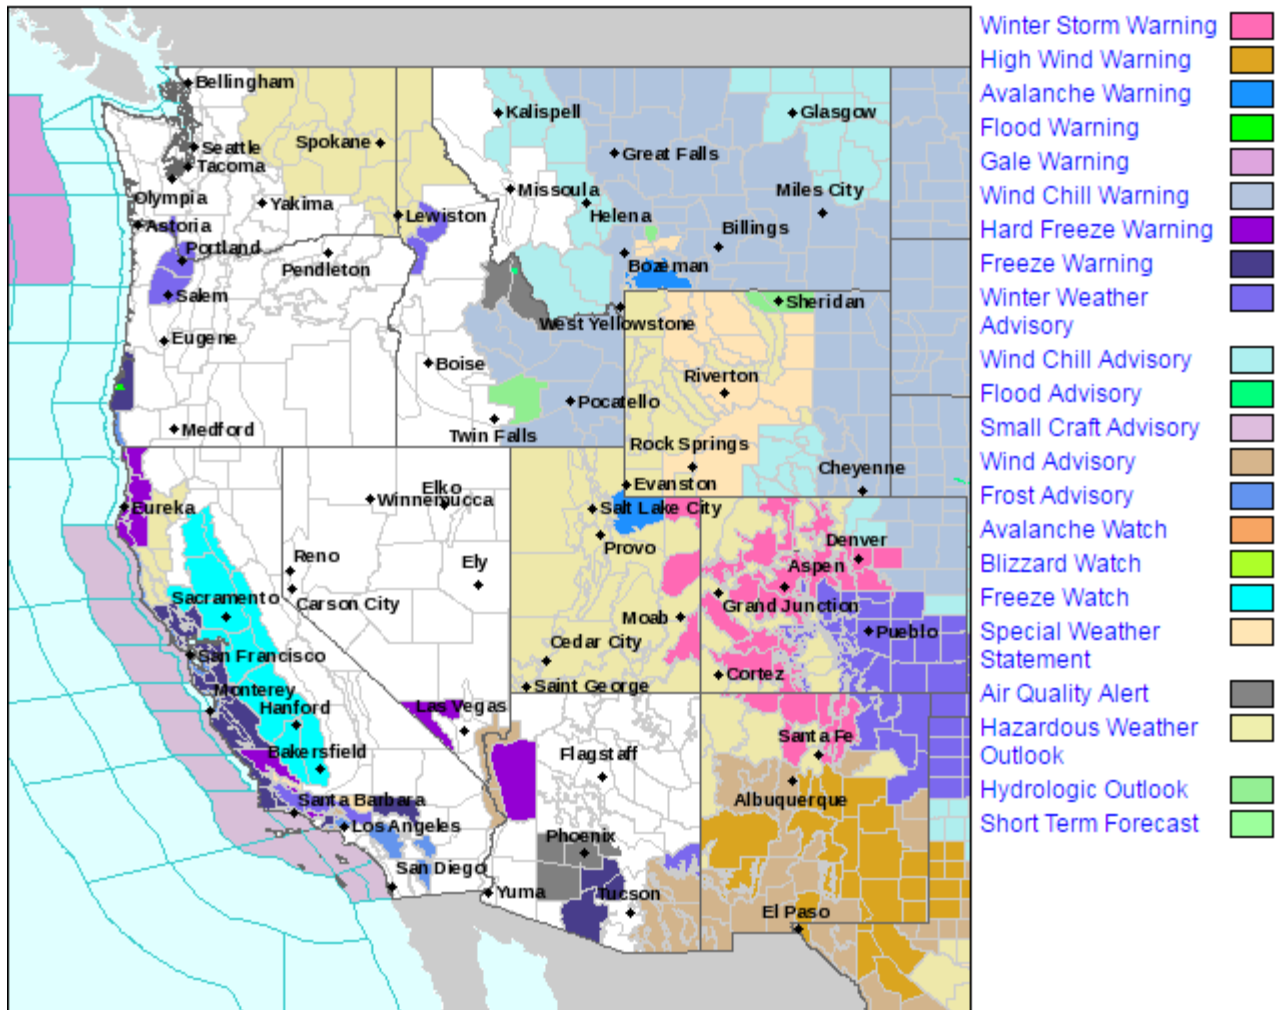

Freezing temperatures in the Valley this weekend with dry conditions. Mainly dry next week except for a chance of light showers during mid week. Mostly clear skies prevail across Northern California early this morning under dry northerly flow. We're seeing just enough of a northerly breeze to keep radiational cooling from its maximum potential. Even still, temperatures are running in the mid to upper 30s across the Valley as of this writing. Dry weather will continue the next few days as high pressure aloft builds over the eastern Pacific. A dry shortwave will pass through the northerly flow later today, enhancing the northerly surface pressure gradient. Locally breezy winds will be possible mainly along the western Sacramento Valley, and down favored Sierra canyons and slopes. Otherwise, we will likely be in for a couple of rather cold nights across interior Northern California. Coldest locations will likely be in wind-sheltered and outlying locations.

SOUTHERN CALIFORNIA

Scattered snow showers across the north slopes, near the I-5 corridor, will diminish this morning. Surface high pressure building into the Northern Rockies late this weekend will support a weak to moderate cool Santa Ana Wind Sunday into Monday. Gradual warming with fair skies is expected through the middle of next week. The only weather at the moment is confined to the north slopes of the mountains where strong north winds are pushing the moisture up creating clouds and scattered snow showers. These wintery conditions will last until late morning when the winds will drop off. There is a winter weather advisory in effect for the north slopes due to the combination of winds, snow, blowing snow and very low wind chills. Otherwise today will be sunny and cool as the low winter sun struggles to warm the cold airmass ushered in by yesterdays cold front.
